Hi Greg,

I heard a little more about this from the AC IC last night. We have a new EUL and I will share this information with him and give you a quick call some time later today.

Best,

Patti

Patti – Maybe you are aware – there is a conversation among senior folks in OEM, OW, ORD about watershed monitoring of the rivers, etc. The next call is Wednesday. I hope that what you are starting up and this nascent HQ discussion are somehow connected. Please call me if you wish.

Greg

Patti –

I have a few ideas, but I would like to reach out into the Labs and get some nominations for you. Shall I proceed? Do you want to talk today first?

Hi Greg,

I am now working as the Liaison Officer in Area Command in Durango and there have been conversations today about the need to start thinking of putting together a long term monitoring strategy for the watersheds potentially impacted by the Gold King Mine release. We are thinking that we would need to pull together a team of expertise in surface water, drinking water, groundwater and sediments and I wanted to informally reach out to you to see if you had any thoughts on specific names. I think it may take a couple of months for a team to develop this strategy. I was also wondering if OW could assist.

Thanks in advance for any thoughts you may have with this and I am also happy to give you a call to discuss in more detail.

Patti
